

This is my first commercial software. Let me give a short brief about the software.

## Secret Box

Imagine you are sending a message, and those messages are personal. And somehow any of his/her family members get to know. It can be a problem right? Moreover, there are lot's of phishers among our friends. Somehow if any of your friends come to know your chats? or place of your meeting? It also can be a problem.

That's why, use the software so keep you some personal words, lines, sentences safe. If anyone could see your chats but wouldn't understand the information.

### How to Use

Open the file and click on "**jdk-16.0.1\_windows-x64\_bin.exe**" (This is for once), and install the software. Then run "**Secret\_Box.jar**". From now each time you use just run this.

### How to send

Just send the **secret Message** (that the software has generated for you) along with the **secret key** you used to generated the secret message.

### Example

JSOTD , 5

here you have to read jsotd and the secret key is 5
